

ZOMBIE SURVIVAL CHOICE GAME

Decision-Based Survival Game — 10-Week Project Plan

Project Type	Decision-Based Survival Game
Language	Java
IDE	Visual Studio Code
Duration	10 Weeks
Core Concepts	OOP, Arrays, Conditionals, Loops, Random Functions, File Handling

WEEK 1

Project Setup & Basic Game Framework

OBJECTIVES

- Set up the project structure in VS Code.
- Create the main game loop.
- Design the main menu interface.
- Implement player name input.

TASKS

- Create Java project folders and files.
- Build the Main Menu: Start Game, Instructions, Exit.
- Take player name as input.
- Create the basic game flow.

DELIVERABLES

- A running Java application.
- Functional main menu system.
- Player registration system.

OUTCOME

A playable game prototype that allows the player to start the game and enter their name.

WEEK 2

Story System & Choice Engine

OBJECTIVES

- Develop the decision-making system.
- Implement story progression based on player choices.

TASKS

- Create survival scenarios.
- Add multiple decision options.
- Validate user input.
- Connect choices with different outcomes.

DELIVERABLES

- Interactive story engine.
- Functional decision system.

OUTCOME

Players can make choices that directly affect the story.

Player Statistics & Inventory System

OBJECTIVES

- Track player status and resources.

TASKS

- Create Health System.
- Create Hunger/Food System.
- Add Inventory Management.
- Store weapons and supplies.

DELIVERABLES

- Player class.
- Inventory system.

OUTCOME

Players can manage health, food, and equipment.

WEEK 4

Random Event Generator

OBJECTIVES

- Increase gameplay unpredictability.

TASKS

- Implement random zombie encounters.
- Add random loot discovery.
- Add environmental events.

DELIVERABLES

- Event generation module.
- Random encounter system.

OUTCOME

Each playthrough becomes more dynamic and unique.

WEEK 5

Zombie Combat System

OBJECTIVES

- Introduce combat mechanics.

TASKS

- Create attack system.
- Create defense system.
- Add escape option.
- Calculate damage and health reduction.

DELIVERABLES

- Functional combat engine.

OUTCOME

Players can fight, defend, or flee from zombies.

WEEK 6

World Exploration System

OBJECTIVES

- Allow players to explore different locations.

TASKS

- Create multiple locations: Hospital, Police Station, Supermarket, Safe House.
- Add location-based events.

DELIVERABLES

- Exploration system.
- Location database.

OUTCOME

Players can travel and discover resources throughout the world.

WEEK 7

Branching Storylines & Multiple Endings

OBJECTIVES

- Expand story depth and replayability.

TASKS

- Create Good Ending.
- Create Bad Ending.
- Create Secret Ending.
- Connect endings with previous choices.

DELIVERABLES

- Multiple story paths.
- Ending system.

OUTCOME

Different decisions lead to different endings.

WEEK 8

Save & Load System

OBJECTIVES

- Preserve player progress.

TASKS

- Save player data to files.
- Load saved game progress.
- Restore inventory and statistics.

DELIVERABLES

- Save Game feature.
- Load Game feature.

OUTCOME

Players can continue their adventure from previous sessions.

WEEK 9

User Interface Enhancement & Testing

OBJECTIVES

- Improve user experience and game stability.

TASKS

- Improve menu appearance.
- Improve game messages.
- Test all features.
- Fix bugs and gameplay issues.

DELIVERABLES

- Optimized game build.

OUTCOME

A polished and stable gameplay experience.

Finalization & Documentation

OBJECTIVES

- Prepare the project for submission.

TASKS

- Perform final testing.
- Create project documentation.
- Write README file.
- Capture screenshots.
- Prepare presentation materials.

DELIVERABLES

- Final game version.
- Documentation package.
- Presentation slides.

OUTCOME

A complete Zombie Survival Choice Game ready for academic submission and demonstration.

Final Project Architecture

Expected Final Outcome

A fully functional Java-based Zombie Survival Choice Game developed in Visual Studio Code, demonstrating decision-making, branching storylines, inventory management, combat mechanics, random events, and multiple endings. The project will showcase core Object-Oriented Programming (OOP) concepts, user interaction, and game logic implementation.

Technology Stack

Language	Java
IDE	Visual Studio Code
Concepts	OOP, Arrays, Conditional Statements, Loops, Random Functions, File Handling
Version Control (Optional)	Git & GitHub
